The Problems

- a teacher explains concepts in a lecture
- he *assigns exercises*
- students can try...
- how are they checked?
 - paper corrections
 - self-corrections, peer-corrections
 - ...intelligent tutoring systems

Interactive Exercises: Risks

- cognitive load (technical & conceptual)
- tiniest bugs become huge
- irrelevant parts
- frustration of unachieved exercises
- they need to be managed by teacher!

Interactive Exercises: Risks

It didn't accept my answer as correct, despite clear syntax (checked by the syntax checker) and my answer being correct.

(LeActiveMath evaluation 2007)

tual)

- irrelevant parts
- frustration of unachieved exercises
- they need to be managed by teacher!

Interactive Exercises: Risks

It didn't accept my answer as correct, despite clear syntax (checked by the syntax checker) and my answer being correct.

(LeActiveMath evaluation 2007)

- irrelevant parts

- frustration

*I am going round in circle in this exercise.
Should I have set up things differently?
(SAiL-M evaluation 2011)*

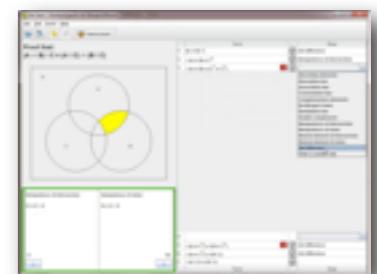

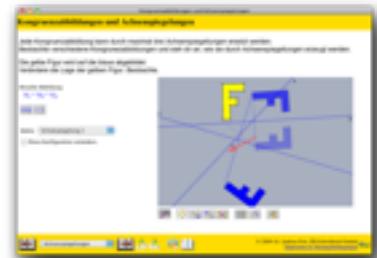

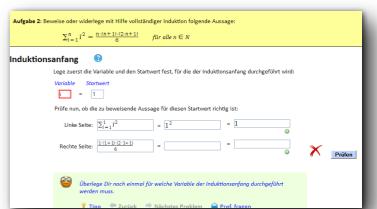

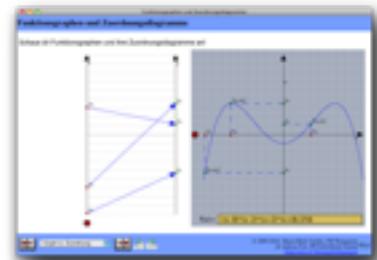

- they need to be managed by teacher!

Outline

- problem statement

Learning Tools

- for undergraduate mathematics teachers

Aufgabe 2: Beweise oder widerlege mit Hilfe vollständiger Induktion folgende Aussage:

$$\sum_{i=1}^n i^2 = \frac{n \cdot (n+1) \cdot (2 \cdot n + 1)}{6} \quad \text{für alle } n \in N$$

- **Induktionsanfang**

Lege zuerst die Variable und den Startwert fest, für die der Induktionsanfang durchgeführt wird:

Variable Startwert

i =

Prüfe nun, ob die zu beweisende Aussage für diesen Startwert richtig ist:

Linke Seite: $\sum_{i=1}^1 i^2$ = =

Rechte Seite: $\frac{1 \cdot (1+1) \cdot (2 \cdot 1 + 1)}{6}$ = =

Prüfen

Überlege Dir noch einmal für welche Variable der Induktionsanfang durchgeführt werden muss.

Tipp

Zurück

Nächstes Problem

Prof. fragen

Kongruenzabbildungen und Achsenspiegelungen

Jede Kongruenzabbildung kann durch maximal drei Achsenspiegellungen ersetzt werden.

Beobachte verschiedene Kongruenzabbildungen und sieh dir an, wie sie durch Achsenspiegellungen erzeugt werden.

Die gelbe Figur wird auf die blaue abgebildet.

Verändere die Lage der gelben Figur. Beobachte.

Aktuelle Abbildung

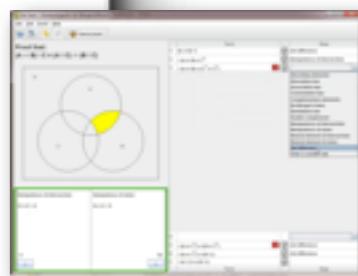

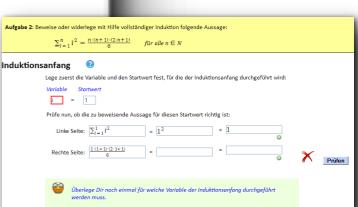

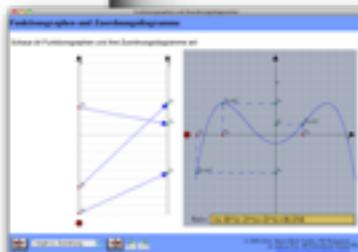

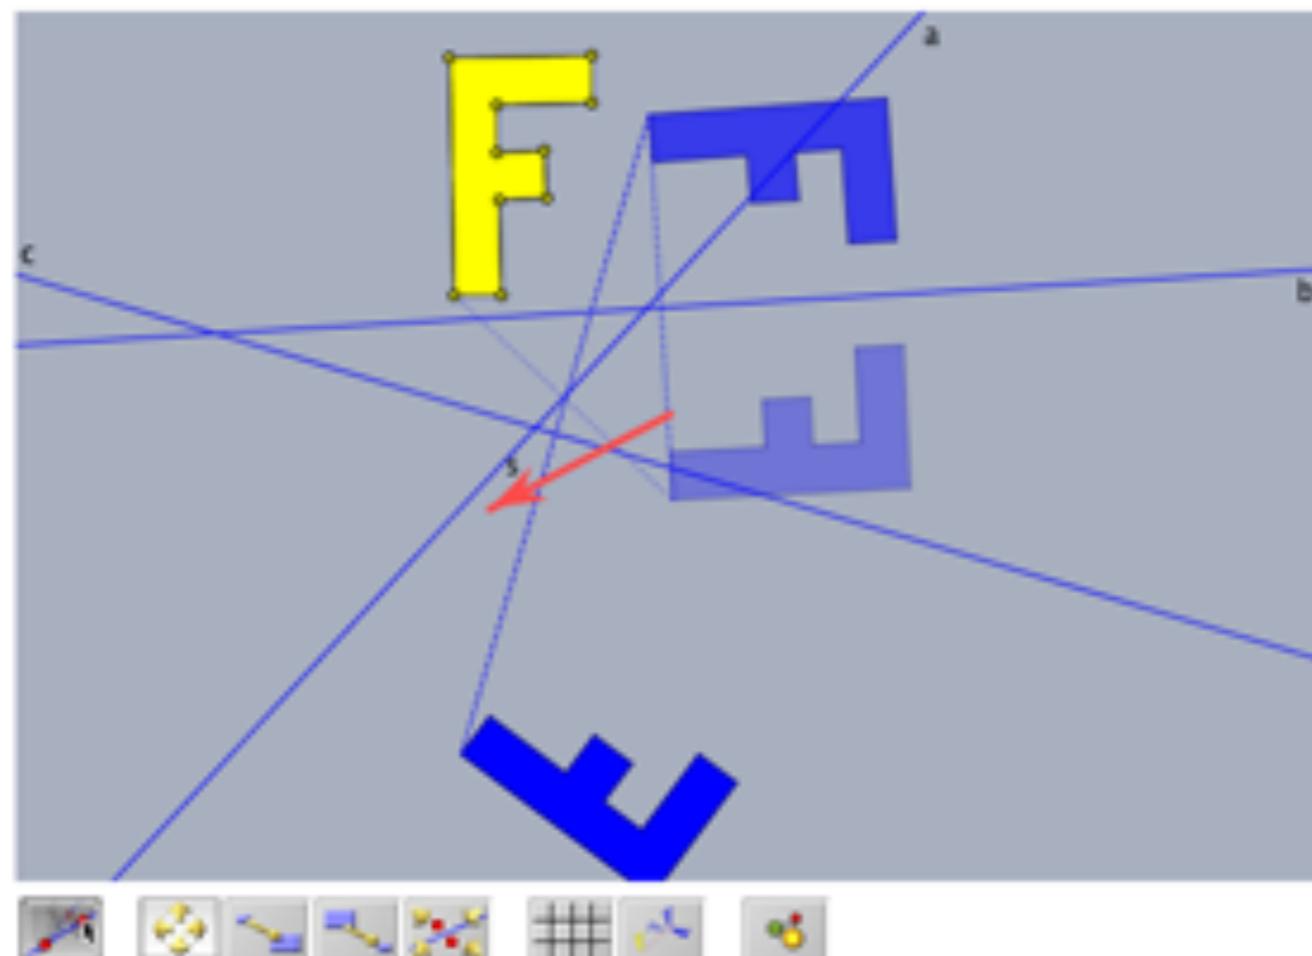

$$Y_C \odot Y_B \odot Y_A$$

Wähle: Schubspiegelung 2

Diese Konfiguration verändern

AchsenSpiegelungen

Integrated Play, Learning Analytics

- start at the LMS
- collect tracks of the usage
- present tracks to teachers:
 - in summary form
 - in individual form
- as much as needed so that the teacher understands what happened

Components

- Learners' browser:
 - in Moodle or StudIP
 - identity reading ⇒ pseudonym, session
- Smala server: logging
 - Servlet front
 - flexible authorization (signature, origin...)
 - events in PList format
 - OpenJPA storage of events
- Smala server: log-views
 - social network authentications (teachers, admin)
 - how-to-deploy explanations
 - JPA queries
 - JSP rendering
 - all open-source

Summary views

- statistical overviews
- to get a broad feeling

13:23:33 Assessment auf ComIn-M Server

Demo: Semi-Automatic Assessment

- Squiggle M
- play randomly
- send a mail: I am lost
- check mail
- reply

Semi-Automatic Assessment

- utility of exercise feedback:
 - eval performance, learn from error
 - automatic feedback never complete
 - mostly « *the standard* »
- approach: semi-automatic assessment
 - learners use tips and feedback of the system
 - seek help when that is insufficient
 - complementarity of tool and teacher

Evaluation

- ~ 150 users, 1000 sessions, 25'000 events
- conclusions:
 - tool starts and transparently logs: ok
 - no real bother about privacy
 - but have to offer alternatives
- help-seeking paradigm works
- used little, but sufficient to answer

Related Work

- SCORM
- single sign on attempts (eg. LTI)
 - current toolset insufficient for analytics
- Jacareto: full recording... too detailed!
- Formid
 - no anonymity, scenario binding
- LOCO-analyst
 - events not enough flexible

Open Avenues

- enhance logging for SquiggleM and MoveltM
 - (show graph, show the moves' log?)
- better client implementation
 - applets a burden (but scrape well)
- summary views enrichment
 - teachers' analysis process
 - visually rich displays

Summary

- learners benefit of automated feedback
- ... but may need more
- semi-automatic-feedback
 - needs understanding what they did
- architecture proposed and deployed
 - worked well for ~150 students
 - bases on a single delivery and logging server
- privacy issues acceptably addressed

Thank you.
